Getting Started & PIN Login

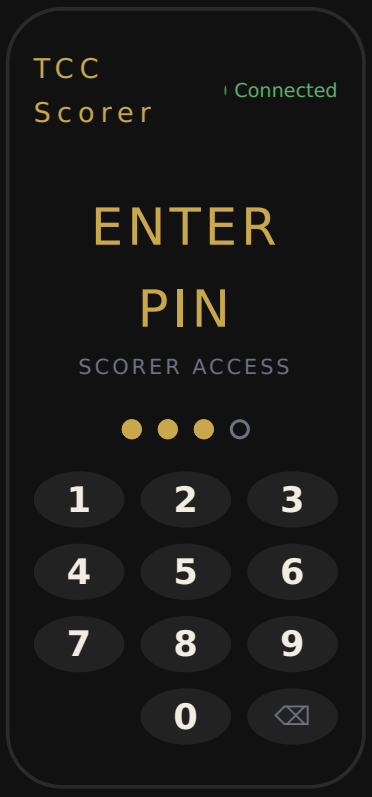

The TCC Scorer is a Progressive Web App (PWA) — it runs in the browser and can be installed to your home screen for a native app feel. No download from an app store required.

Installing to Home Screen

On iOS (Safari): tap the Share icon → *Add to Home Screen*. On Android (Chrome): tap the menu → *Install App*. Once installed, the scorer opens full-screen with the TCC tiger icon.

PIN Login

When you open the app you'll be asked to enter your scorer PIN. This is a 4-digit code assigned by your club administrator. The PIN grants access to the fixture list and match scoring.

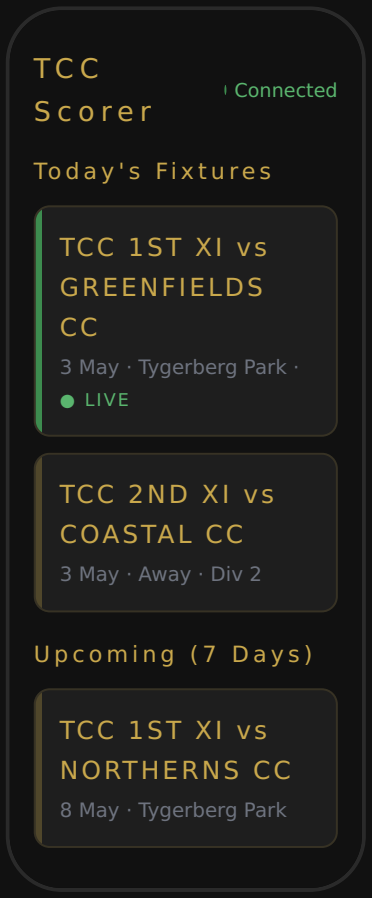

💡 Your PIN is set when you start a new match. The same PIN must be used by anyone who wants to take over scoring mid-match. Keep it simple — you'll be typing it on a small screen.

02

Fixtures Screen

After a successful PIN entry you land on the Fixtures screen. This is the home screen of the app.

Three sections

Today's Fixtures — matches scheduled for today. A fixture with a **Live** badge is already being scored; tapping it will ask for the scoring PIN to take over.

Upcoming (7 Days) — fixtures in the next week. Tap to start scoring when the time comes.

Recent Results — completed matches from the last 30 days. Tap any result to view the full scorecard and download a PDF.

Recent Results & Date Range

Use the **↻ Refresh** button to reload the fixture list at any time.

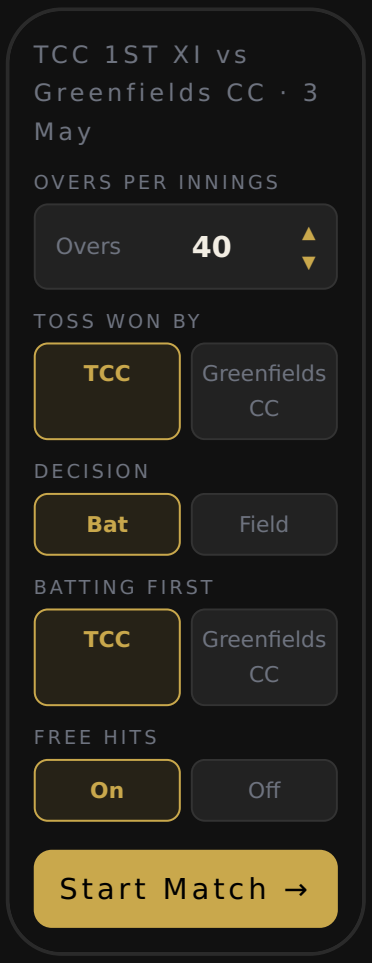

The Recent Results section defaults to the last 30 days. Use the **From** and **To** date pickers to search further back, then tap **Go** to reload.

💡 Tapping a completed match opens the full scorecard modal — including batting, bowling, fall of wickets, and the Balls tab — with a **⬇ PDF** download button.

03

Match Setup

Tapping a fixture opens the Setup screen. Fill in these details before starting the match.

1. **Set overs per innings**
   Use the spinner to set the match length. Set to 0 for unlimited overs.

2. **Record the toss**
   Select who won the toss, then whether they chose to bat or field. The batting team is updated automatically.

3. **Confirm batting team**
   Override the auto-selection here if needed.

4. **Free Hits**
   Toggle off for leagues that don't use free hits (e.g. some club formats).

5. **Set match PIN**
   A 4-digit PIN is required before the match starts. Other scorers can use this to take over scoring if needed.

Opening Players

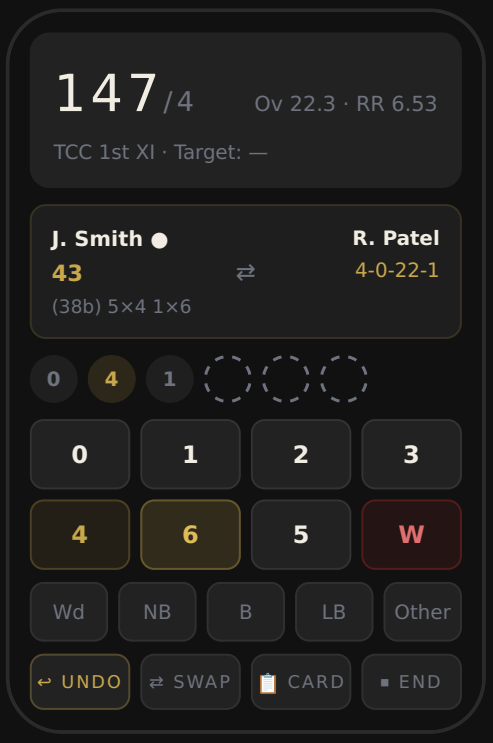

Immediately after tapping **Start Match**, a modal asks for the two opening batters and the opening bowler. Enter full names — these appear on the scoreboard and in the PDF.

> ⚠️ Names entered here are used throughout the match. Consistent spelling matters — especially for the bowler, as the system tracks their figures across overs.

0 4

Scoring Screen Overview

The scoring screen has four distinct zones. Understanding what lives where will make you faster under pressure.

① SCOREBOARD

Shows current score, wickets, overs, run rate, team name and (in 2nd innings) the target.

② PLAYER BAR

Striker (left) with runs, balls, fours & sixes. Current bowler (right) with O-M-R-W figures. Tap ⇄ to manually swap strike.

③ CURRENT OVER

Six chip slots showing each ball in the current over. Pending balls shown as dashed circles. Tap any delivered ball chip to edit it.

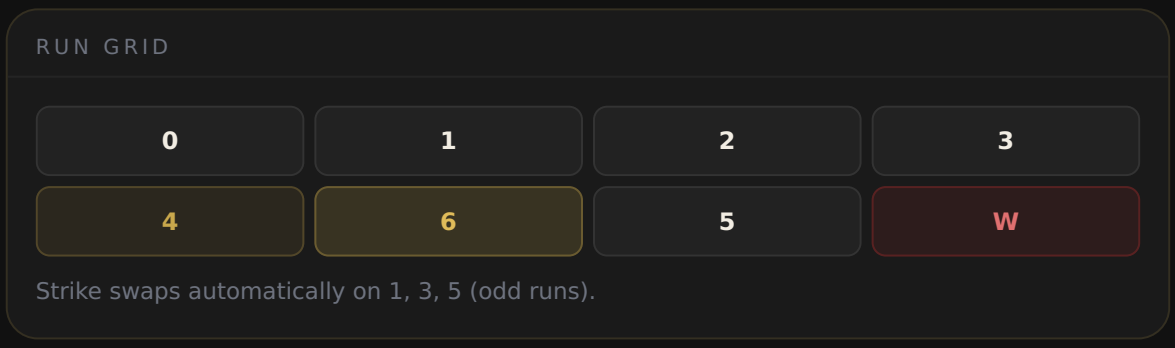

④ INPUT AREA

8-button run grid (0–6 + W), extras row, and the action bar (Undo, Swap, Scorecard, End Innings).

05

Recording Balls

Every legal ball is recorded by tapping the run scored. The scoreboard, player bar, and over chips update instantly.

Button reference

- **0** — dot ball
- **1, 2, 3, 5** — runs scored
- **4** — boundary four
- **6** — boundary six
- **W** — wicket (opens dismissal modal)

Strike rotates automatically on odd runs (1, 3, 5). After a boundary (4 or 6) the striker stays at the same end.

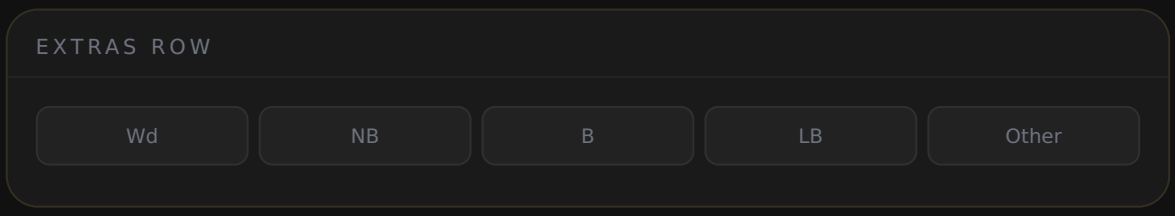

Commentary

There is an optional commentary field above the run grid. Type a short note before tapping a run button — it gets stamped on that ball and appears in the Ball tab.

ℹ️ Batter milestones are announced automatically — toasts appear at 50, 100, 150, and 200 runs.

06

Extras

Wide (Wd)

Tap **Wd**. A run picker appears — select how many runs were scored off the wide (1 is the default penalty, add any additional runs). Does not count as a legal ball. Strike swaps if an odd number of wide runs are scored.

No Ball (NB)

Tap **NB**, then select how many runs the batter hit off the delivery (0–6). A second step asks if anything additional happened off the no-ball:

- **None** — just the no-ball penalty + bat runs
- **Bye / Leg-bye** — extra runs added to byes/leg-byes total
- **Overthrow** — additional overthrow runs
- **Penalty** — 5-run penalty added to penalty extras

The ball chip will show the full detail, e.g. `Nb+3+2B`. Does not count as a legal ball. If Free Hits are enabled, a Free Hit banner will appear for the next delivery.

Bye (B) / Leg-bye (LB)

Tap **B** or **LB**, then select the number of runs. These count as legal deliveries and are added to the byes/leg-byes extras column, not the batter's score.

Other (Overthrow / Penalty)

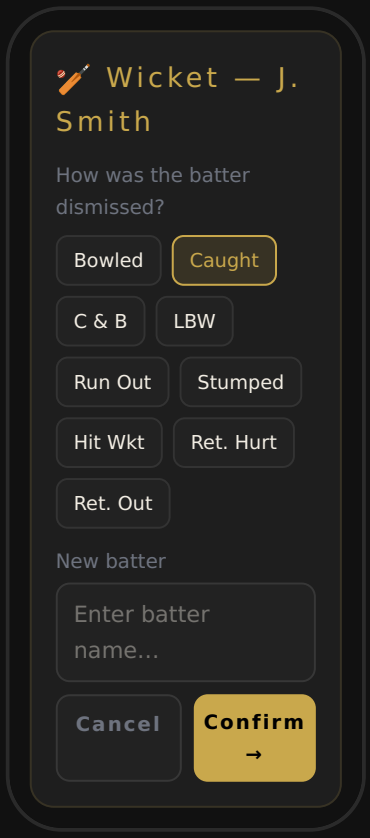

Tap **Other** to record overthrow runs or a 5-run penalty. Select the type, then the number of runs. These are tracked separately in the extras total.

💡 The chip label on the over row shows exactly what happened — `Wd` `NB` `B` `LB` — so you can glance back at any ball in the over.

07

Wickets

Tap **W** in the run grid. The wicket modal opens.

Dismissal types

- **Bowled, LBW, Hit Wicket** — bowler credited
- **Caught** — bowler credited
- **Caught & Bowled** — bowler credited
- **Stumped** — bowler credited
- **Run Out** — no bowler credit
- **Retired Hurt** — batter is not out; they can return later in the innings
- **Retired Out** — counts as a wicket

Retired Hurt re-entry

When a subsequent wicket falls, any previously retired-hurt batters appear as quick-select buttons at the top of the new batter field.

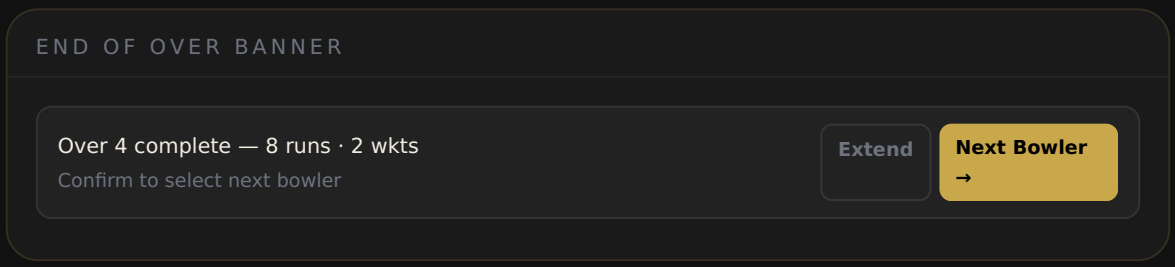

Fall of wicket details (score, over, batter name) are captured automatically and appear in the scorecard FOW table.

08

End of Over

After the 6th legal ball an end-of-over confirmation bar slides in at the top of the input area.

1. **Confirm the over summary**
   The banner shows runs scored and wickets in the over.

2. **Tap "Next Bowler →"**
   The bowler selection modal opens. Scroll through previous bowlers or type a new name.

3. **Select or enter the bowler**
   Previously used bowlers appear as quick-select buttons showing their current figures. The same bowler cannot bowl consecutive overs.

> 💡 If two bowlers share the same name, the app will ask you to confirm which one you mean — it tracks them as separate entities behind the scenes.

Extending an Over

In some situations (e.g. a delivery needs to be re-bowled after the 6th ball), tap **Extend** to keep the current over going. The next legal ball will then auto-complete the over.

09

Editing Balls & Overs

Editing a Ball in the Current Over

Tap any delivered ball chip in the current over row. An edit modal opens where you can change the type (run/extra/wicket), the run value, and the extra type. Tap **Save** to apply — the bowler's figures and all batting stats recalculate automatically.

Undo

Tap ↩ **Undo** in the action bar to reverse the last ball in the current over. Batter stats, bowler figures, and the score are all rewound correctly.

> ⚠️ Undo only works within the current over. Once an over is confirmed and the next bowler is selected, use the over history editor instead.

Editing a Completed Over

Scroll down past the current over to find the collapsible **Over History** section. Tap the header to expand it, then tap any completed over row to open it. Each ball in that over is shown — tap a ball to edit it. All stats are recalculated from scratch after saving.

10

Mid-Over Bowler Change

Wrong Bowler Selected

If you selected the wrong bowler at the start of an over before any balls have been bowled, tap their name in the player bar and select the correct bowler. All balls in the over will be attributed to the correct bowler — no split occurs.

Injury or Suspension Mid-Over

If a bowler is genuinely unable to continue mid-over, tap their name in the player bar and select the replacement. This creates a **split over** — both bowlers share the same over number, each attributed only the balls they actually bowled. For example, if Bowler A bowled 2 balls then Bowler B took over, Bowler A is credited 2 balls and their runs, Bowler B gets the remaining 4 balls and their runs. Together they complete the over.

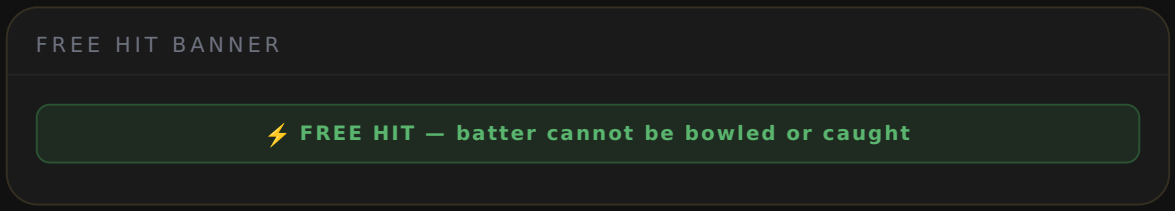

The over summary header in the Balls tab and over history will show both names (e.g. **A. Patel / R. Singh**), and each ball row shows its own bowler's name.

> ⚠️ The replacement bowler cannot be the same bowler who bowled the previous completed over.

11

Free Hit

When Free Hits are enabled in setup, a no-ball automatically triggers a free hit for the next delivery.

The green **FREE HIT** banner persists until the next legal ball is recorded. On a free hit delivery, only run outs are valid dismissals — the wicket button is still available for scoring purposes but should only be used for a run out.

To disable free hits for your league format, toggle them off on the Setup screen before starting the match.

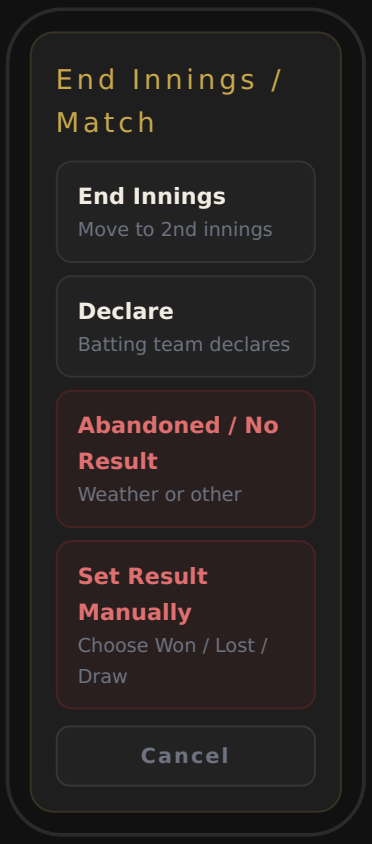

12

Ending an Innings & Match

An innings ends automatically when:

- 10 wickets have fallen
- The over limit is reached
- The target is reached (2nd innings)

You can also end an innings manually by tapping ■ **End** in the action bar. A modal offers contextual options:

1st Innings options

- **End Innings** — moves to 2nd innings, sets target
- **Declare** — batting team declares
- **Abandoned / No Result**
- **Set Result Manually**

2nd Innings options

- **End Match** — records final result
- **Declare**
- **Abandoned / No Result**
- **Set Result Manually**

Match Result Screen

After the match ends, the app moves to a result screen showing the final score, result string (e.g. "TCC won by 5 wickets"), and a button to return to fixtures.

13

Super Over

If scores are tied at the end of the 2nd innings, a modal automatically prompts whether to play a Super Over.

> ⚡ A Super Over resets the match to 1 over per side. The team that batted 2nd in the main match bats first in the Super Over. The scoreboard shows a ⚡ SUPER OVER badge throughout.

Super overs follow exactly the same scoring workflow as the main match. If the Super Over also ties, another Super Over is offered. At the end of the Super Over, select the match result via the normal End Match flow.

14

Scorecard & PDF Export

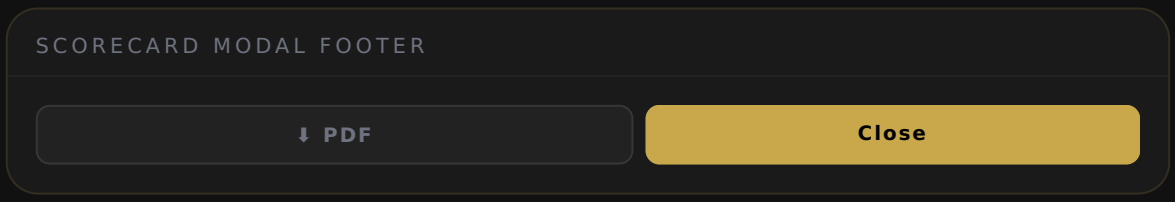

Live Scorecard (during match)

Tap 📋 **Card** in the action bar at any time. The scorecard modal shows:

- Full batting table — runs, balls, 4s, 6s, dismissal method
- Bowling table — O-M-R-W for each bowler
- Extras breakdown
- Fall of wickets
- Partnerships
- 1st innings summary (when in 2nd innings)

PDF Export

The **⬇ PDF** button at the bottom of the scorecard modal generates and downloads a full A4 PDF scorecard. The filename includes the opponent name and date.

💡 The PDF includes both innings when available, fall of wickets, and partnership data. It's designed to A4 and prints cleanly.

15

Recent Results

The **Recent Results** section on the Fixtures screen lets you access scorecards from past matches.

1. **Set the date range**
   Use the From / To date pickers. Default is the last 30 days.

2. **Tap Go**
   The list refreshes with all completed matches in the selected range.

3. **Tap a result**
   The full scorecard modal opens — including both innings and the Balls tab.

4. **Download the PDF**
   Tap ⬇ PDF to generate and download the scorecard for that match.

16

Offline Mode

The TCC Scorer is designed to work even without an internet connection during a match.

CONNECTION STATUS INDICATORS

- Connected — syncing live
- Syncing…
- Offline — updates queued
- Error — check connection

Watch the status indicator in the top-right corner of the app. When offline:

- All ball-by-ball scoring is saved locally on the device
- Updates are queued and sent automatically when connectivity returns
- A toast notification confirms when queued updates have been flushed

⚠ The live display on the TCC website will not update while offline. Scoring state is preserved on the device — do not close the browser tab or clear the app cache mid-match.

Resuming After a Crash or Refresh

If the app is accidentally closed or the browser refreshes, reopen it and enter your PIN. A **Resume Match?** modal will appear with a summary of the last saved state. Tap **Resume →** to continue scoring exactly where you left off.

Takeover Scoring

If another scorer needs to take over a live match from a different device, they tap the fixture (which will show a ● Live badge) and enter the match PIN. The app loads the current match state and they can continue scoring seamlessly.
